

Notes:

- For XTAL assume stray capacitance 5nF
- For the XTAL the sum of the frequency tolerance and frequency stability must not exceed 10ppm.
- Use 2pF capacitors on each side of the crystal (C1 and C2 to ground)

- SN74CB3T3257PWR designed to work with SPI and QSPI (Has low C and R)

- 0603 Components are used on the RF trace
